Task 1: ER Diagram Exercise

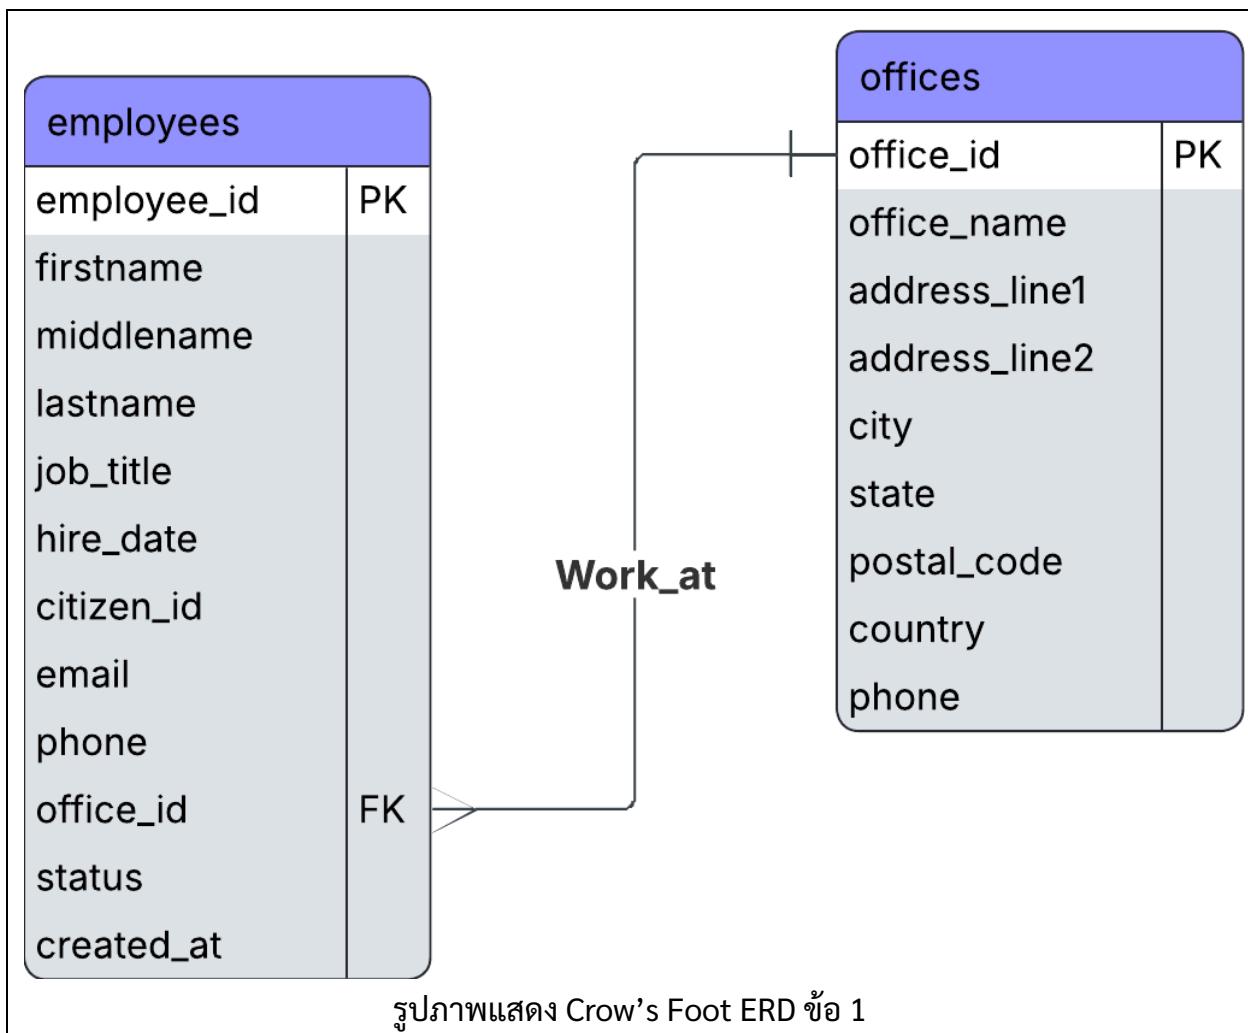

01: A law firm wants to keep employees and their offices.

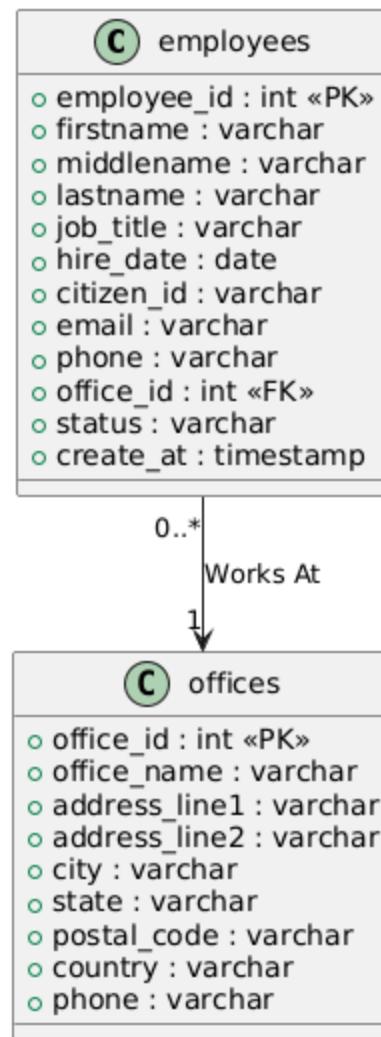

1. employees(employee_id, firstname, middlename, lastname, job_title, hire_date, citizen_id, email, phone, office_id, status, create_at)
2. offices(office_id, office_name, address_line1, address_line2, city, state, postal_code, country, phone)

```

12: A restaurant wants to keep tables, menus, and order of each table.

1. menu_categories (category_id, category_name, is_alcoholic)
2. menu_items (menu_id, item_name, price, description, category_id, is_available)
3. tables (table_id, table_number, seating_capacity, zone_name)
4. staff (staff_id, first_name, nickname, position)
5. orders (order_id, table_id, staff_id, order_time, payment_status, total_amount)

<https://drive.google.com/file/d/1BEfhEGeqCAcsQspxfZj0yslVw9psUYNf/view?usp=sharing>

รูปภาพแสดง Chen ERD ข้อ 12

```
--สร้างตารางหมวดหมู่เมนู
CREATE TABLE menu_categories (
    category_id SERIAL PRIMARY KEY,
    category_name VARCHAR(100) NOT NULL,
    is_alcoholic BOOLEAN DEFAULT FALSE
);

--สร้างตารางรายการเมนู
CREATE TABLE menu_items (
    menu_id SERIAL PRIMARY KEY,
    item_name VARCHAR(150) NOT NULL,
    price DECIMAL(10, 2) NOT NULL,
    description TEXT,
    category_id INT,
    is_available BOOLEAN DEFAULT TRUE,
    FOREIGN KEY (category_id) REFERENCES menu_categories(category_id)
);

--สร้างตารางโต๊ะ
CREATE TABLE tables (
    table_id SERIAL PRIMARY KEY,
    table_number INT NOT NULL UNIQUE,
    seating_capacity INT,
    zone_name VARCHAR(50)
);

--สร้างตารางพนักงาน
CREATE TABLE staff (
    staff_id SERIAL PRIMARY KEY,
    first_name VARCHAR(100) NOT NULL,
    nickname VARCHAR(50),
    position VARCHAR(100)
);

--สร้างตารางคำสั่งชิ้อ
CREATE TABLE orders (
    order_id SERIAL PRIMARY KEY,
    table_id INT,
```

```
staff_id INT,  
order_time TIMESTAMP DEFAULT CURRENT_TIMESTAMP,  
payment_status VARCHAR(20),  
total_amount DECIMAL(10, 2) DEFAULT 0.00,  
FOREIGN KEY (table_id) REFERENCES tables(table_id),  
FOREIGN KEY (staff_id) REFERENCES staff(staff_id)  
);
```

Task 2: Modify Modified Existing Database

Step 01: Insert Duplicate and Conflicting Data

Insert Anomalies:

- A duplicate `studentID` but with a different name.

`INSERT INTO students (studentID, firstname, lastname) VALUES (101, 'Mark', 'Taylor');`

- A duplicate `courseID` but with a different course name.

`INSERT INTO courses (courseID, courseName) VALUES (201, 'Advanced Databases');`

- The same combination of `studentID` and `courseID` but with a different grade.

`INSERT INTO grades (studentID, courseID, grade) VALUES (101, 201, 'B');`

students table		<code>studentid</code> integer	<code>firstname</code> character varying (50)	<code>lastname</code> character varying (50)
	1	101	Max	Naja
	2	102	Beam	LnwZa
	3	103	Up	Malaew
	4	101	Mark	Taylor

courses table		<code>courseid</code> integer	<code>coursename</code> character varying (100)	
	1	201	Database Systems	
	2	202	Data Model	
	3	203	Computer Architecture	
	4	201	Advanced	

grades table		<code>studentid</code> integer	<code>courseid</code> integer	<code>grade</code> character varying (2)
	1	101	201	B
	2	102	201	A
	3	103	202	B
	4	101	201	B

Step 02: Resolve the Anomalies

Delete the duplicate and conflicting rows:

- students table

`DELETE FROM students WHERE studentID = 101 AND firstname = 'Mark';`

- courses table

`DELETE FROM courses WHERE courseID = 201 AND courseName = 'Advanced Databases';`

- grades table

`DELETE FROM grades WHERE studentID = 101 AND courseID = 201 AND grade = 'B';`

students table		studentid integer 	firstname character varying (50) 	lastname character varying (50) 
	1	101	Max	Naja
	2	102	Beam	LnwZa
	3	103	Up	Malaew

courses table		courseid integer 	coursename character varying (100) 
	1	201	Database Systems
	2	202	Data Model
	3	203	Computer Architecture

grades table		studentid integer 	courseid integer 	grade character varying (2) 
	1	101	201	B
	2	102	201	A
	3	103	202	B

Step 03: Add Primary Key and Foreign Key Constraints

Add primary key(PK) to each table:

- students table

```
ALTER TABLE students ADD CONSTRAINT pk_students PRIMARY KEY (studentID);
```

- courses table

```
ALTER TABLE courses ADD CONSTRAINT pk_courses PRIMARY KEY (courseID);
```

- grades table

```
ALTER TABLE grades ADD CONSTRAINT pk_grades PRIMARY KEY (studentID, courseID);
```

Add foreign key(FK):

```
ALTER TABLE grades ADD CONSTRAINT fk_grades_students FOREIGN KEY (studentID)
REFERENCES students(studentID);
```

```
ALTER TABLE grades ADD CONSTRAINT fk_grades_courses FOREIGN KEY (courseID)
REFERENCES courses(courseID);
```

students table	<pre>ERROR: duplicate key value violates unique constraint "pk_students" Key (studentid)=(101) already exists. SQL state: 23505 Detail: Key (studentid)=(101) already exists.</pre>
courses table	<pre>ERROR: duplicate key value violates unique constraint "pk_courses" Key (courseid)=(201) already exists. SQL state: 23505 Detail: Key (courseid)=(201) already exists.</pre>
grades table	<pre>ERROR: duplicate key value violates unique constraint "pk_grades" Key (studentid, courseid)=(101, 201) already exists. SQL state: 23505 Detail: Key (studentid, courseid)=(101, 201) already exists.</pre>

Step 04: Add the departments Entity and more tables

departments table	departmentid [PK] integer	departmentname character varying (50)
	1	Computer Science
	2	Information Systems

students table	studentid [PK] integer	firstname character varying (50)	lastname character varying (50)	departmentid integer
	101	Max	Naja	1
	102	Beam	LnwZa	1
	103	Up	Malaew	1

courses table	courseid [PK] integer	coursename character varying (100)	departmentid integer
	201	Database Systems	2
	202	Data Model	2
	203	Computer Architecture	2

Step 04-01: A law firm wants to keep employees and their offices.

employee_id [PK] integer	firstname character varying (50)	middlename character varying (50)	lastname character varying (50)	job_title character varying (100)	hire_date date	citizen_id character varying (50)	email character varying (100)	phone character varying (20)	office_id integer	status character varying (50)	create_at timestamp without time zone

Summary

จากแลบปีนี้ได้เรียนรู้เรื่องของการสร้าง Primary Key และ Foreign Key เพื่อป้องกันการซ้ำของข้อมูลจากการทำแลบปีนี้ทำให้รู้ว่า constraints มีความสำคัญในการรักษาความถูกต้องและความสมบูรณ์ของข้อมูล โดย Primary Key ป้องกันข้อมูลซ้ำ ขณะที่ Foreign Key รับรองความสัมพันธ์ระหว่างตาราง

และการขยายฐานข้อมูลด้วยการเพิ่ม departments table และเชื่อมกับตาราง students และ courses ทำให้เข้าใจถึงการออกแบบฐานข้อมูลแบบ normalized ที่ช่วยลดความซ้ำซ้อนและจัดระเบียบข้อมูลได้ดีขึ้น ความท้าทายที่พบคือการลบข้อมูลเกินจำเป็น จากการผิดพลาดทางเทคนิค
