CPE 241 Database

Problem Session #11 Peer Feedback

Date: Check PS11 assessment activities on LEB2

Introduction

In this lab, you will gather feedback from two other groups working on different projects. This will help ensure that your database design is clear, well-structured, and understandable to those who were not involved in its development. Effective communication of your design is essential in real-world database projects, where teams must collaborate and validate each other's work.

Objectives

- 1. To be able to effectively express databases and UX/UI design**
- 2. To gather and apply constructive feedback**
- 3. To justify UX/UI and query design choices**

Instructions

STEP 1: Prepare for the Presentation

- Students should review their database, reports (Lab 7-8) and UX/UI design (Lab9) to ensure it is clear and well-structured.
- Identify key points they will explain to another group, including:
 - How the database is structured and why it was designed this way.
 - How UX/UI choices relate to the database.
 - The purpose of their reports and how they solve real-world data problems.
- Create a brief summary or slide to support their explanation (optional but useful).

STEP 2: Present to Two Other Groups

- Students will pair up with two other groups working on different projects.
- Each group takes turns presenting their design and UX/UI decisions.
- While presenting, they should:
 - Explain their database and user interface clearly.
 - Describe their reports and how they retrieve useful data.
 - Answer any questions or challenges raised by the other groups.

STEP 3: Gather Feedback and Discuss Improvements

- The listening group should provide feedback on:
 - Clarity of the database structure and UX/UI design.
 - Potential issues in data relationships, UI navigation, or database logic.
 - Effectiveness of reports in solving data retrieval problems.
- Each group should note down suggestions and discuss how to refine their work.

STEP 4: Refine and Submit Work

- After receiving feedback, students should:
 - Make adjustments to their database structure or UX/UI if needed.
 - Optimize or refine reports based on feedback.
- Submit the following:
 - Refined database and UX/UI design (if changes were made).
 - Refined reports with explanations of their purpose and function (if changes were made).
 - A brief summary of the feedback received and what was improved.

Deliverables

Students must submit a report detailing:

1. Refined Database and UX/UI Design (*if modifications were made based on feedback*)
 - Updated ERD or schema adjustments (*if any*).
 - Revised UI wireframes or user flow diagrams.
 2. Presentation Summary
 - Key insights from presenting to other groups.
 3. Refined Reports (*if modifications were made based on feedback*)
 - Summary of feedback received from peer groups.
 - List of changes made based on that feedback.
-

Final Submission

- Compile all written explanations and/or pictures into a single a PDF file and ensure it is named appropriately (e.g., **PS11_YourGroupName.pdf**) then submit the report on LEB2 before the deadline.
- Upload the PDF report to the Assessment Activities section for PS11 on LEB2.
